

# NEBO®

GAS: CI D1 GRP ABCD T4

DUST: CII, D1, GRP EFG, T4

## CERTIFIED INTRINSICALLY SAFE

## #6757 200 LUMEN LED HEAD LAMP

### What is a Safety Rated Flashlight?

In some working environments, flashlights are needed that can be safely operated when explosive gases, liquids, dusts, or fibers are present. Flashlights that have been certified as intrinsically safe are designed in such a way that they will not be a source of ignition in those hazardous environments.

### LIGHT OUTPUT

- HIGH (200 lumens): 2.5 hours / 216 meters
- LOW (100 lumens): 5 hours / 75 meters

### FEATURES

- Intrinsically safe for use in hazardous conditions
- Body constructed of high-impact ABS plastic
- 90° pivoting light head
- Adjustable head band for head or helmet
- Built-in Hydrogen gas release valve
- Tamper-proof battery carriage design

### OPERATION

- Top-positioned, ON/OFF button

### BATTERIES

- Powered by 3 AAA batteries (included)  
(Only use the following Alkaline battery types for replacement: Energizer E92, Duracell MN2400, Panasonic AAA LR03)

### SPECS

- 0.28 lbs.
- (H) 3.14" x (W) 1.96" x (D) 1.77"

Quickly and easily identify the safety rating of your flashlight with our instant-read color marking system

Abbreviated CLASS, DIVISION, GROUP, TEMP & ZONE

**NEBO®**  
GAS: CI D1, GRP ABCD, T4  
DUST: CII, D1, GRP EFG, T4

**GREEN STRIPES** indicate that the product meets **DIVISION 1** requirements

**NEBO®**  
GAS: CI, D2, GRP ABCD, T4  
DUST: CII, D2, GRP FG, T4

**YELLOW STRIPES** indicate that the product meets **DIVISION 2** requirements

The NEBO Intrinsic Products are marked with a new Color Banded system to easily identify the classification level of the safety rating. These bands are marked on the product and packaging. This is to help users of the portable safety lighting to quickly identify if they have the proper flashlight for the area they are about to enter.
